HACKATHON PROTOTYPE

Aura Model Studio Pro

Exploring consistent portrait analysis and practical styling guidance.

Team: Ishan Saroha · Harsh · Omprakash · Nikhil Bhardwaj

Made with GAMMA

THE CAPTURE PROBLEM

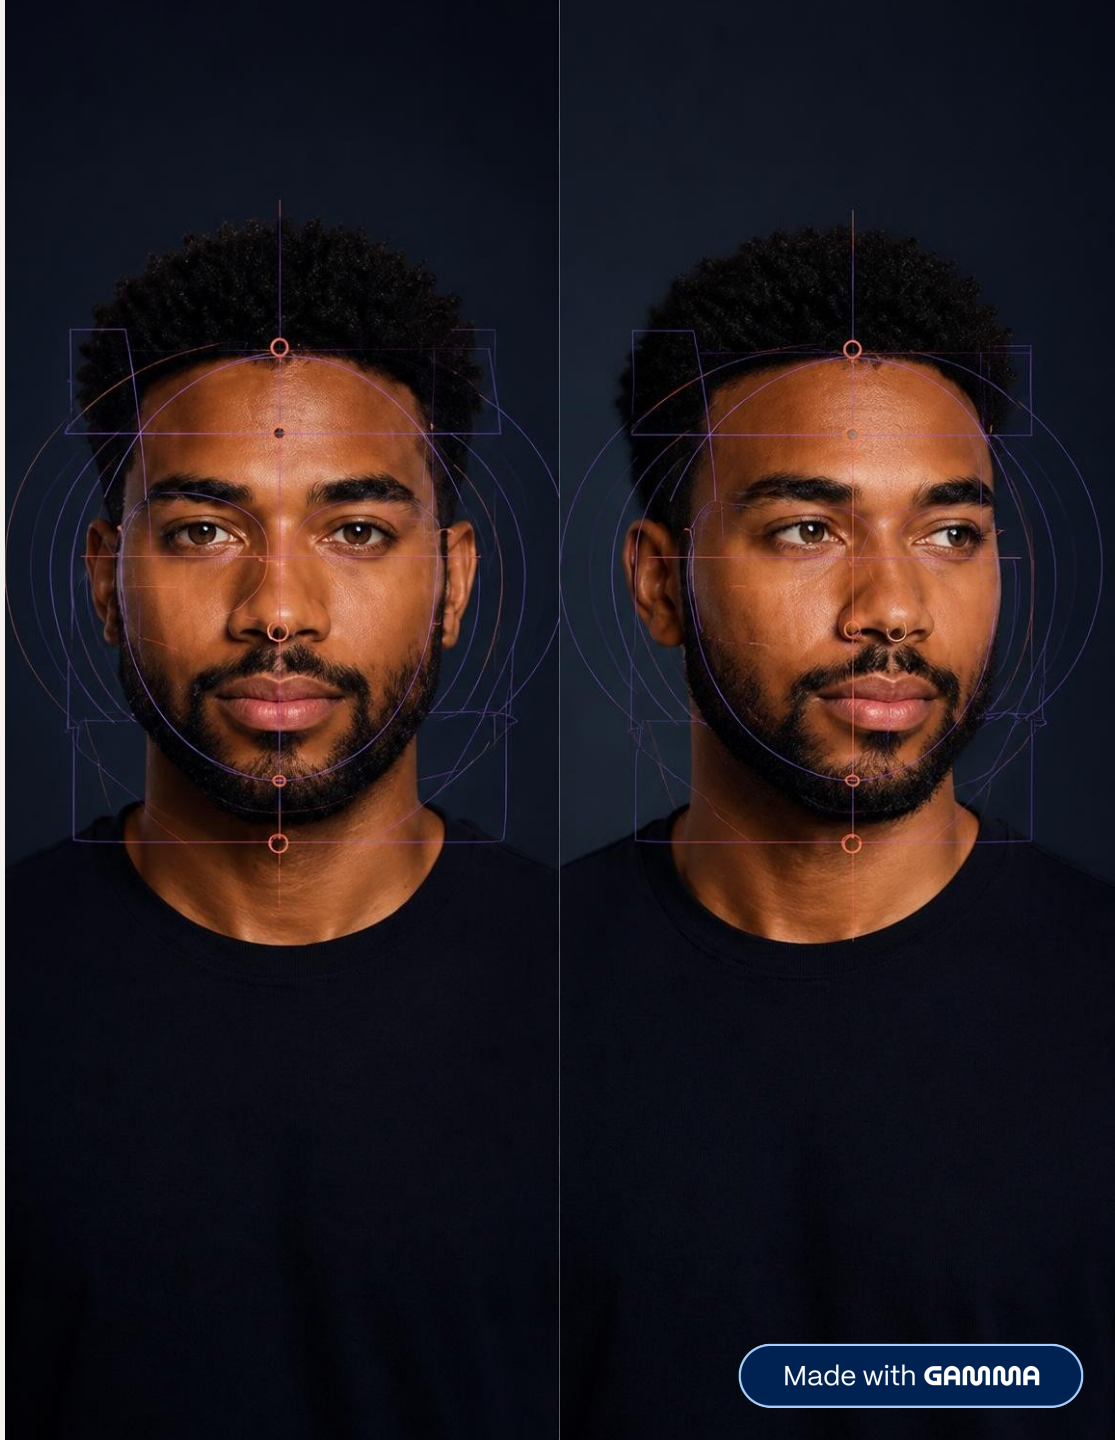

Portraits change with the shot

Camera angle, lens distance and lighting shift how facial geometry appears before any code runs.

Our prototype tests whether angle-aware calibration can normalize capture noise for consistent styling guidance.

Angle & pose: Pitch and yaw distort ratios

Lighting shift: Shadows reshape perceived contours

Made with GAMMA

PROTOTYPE PIPELINE

From a portrait to styling insights

01

1 · Capture input

Accept photo upload or live camera feed under ambient studio lighting.

02

2 · Geometry & pose

Estimate head pitch, yaw, and landmark symmetry to calibrate camera perspective.

03

3 · Styling guidance

Translate calibrated proportions into face-shape categories and hairstyle suggestions.

A three-stage experimental pipeline connecting raw camera frames directly to actionable personal grooming cues.

Made with GAMMA

STUDIO TOOLKIT

A studio for exploration

CALIBRATION & SIMULATION

Angle calibration & score simulator

Interactive sliders let users simulate pitch and roll adjustments in real time, inspecting how landmark confidence reacts to pose variation.

COMPARATIVE ANALYSIS

Breakdowns & ensemble tools

Inspect feature-by-feature ratios, side-by-side profile comparisons, and multi-model consensus across diverse lighting angles.

Made with GAMMA

ETHICS & ROADMAP

Prototype, learn, improve.

Aura Model Studio Pro · Hackathon 2026

What we demo today

A working portrait-to-guidance flow showing pose-aware facial geometry extraction.

Validation & privacy next

Rigorous cross-demographic consistency audits, bias benchmarks, and explicit on-device privacy controls.

Subjective by design

Styling scores are framed as exploratory aesthetic cues, never objective measures of personal worth.
